

**THAT WHICH IS CLAIMED:**

1. (Original) A composition comprising:
  - a) an acid component selected from the group consisting of 1) a sulfuric acid, 2) a fluorosulfonic acid, 3) a perhaloalkylsulfonic acid, 4) an ionic liquid, 5) mixtures of Bronsted acids and Lewis acids, and 6) combinations of any two or more thereof; and
  - b) a polymer.
2. (Original) A composition in accordance with claim 1 wherein said polymer is a polyacrylate having a formula of  $[-\text{CH}_2-\text{CH}(\text{CO}_2\text{R})-]_n$  where R is a Group IA element.
3. (Original) A composition in accordance with claim 2, wherein said Group IA element is hydrogen.
4. (Original) A composition in accordance with claim 1 wherein said acid component is trifluoromethanesulfonic acid.
5. (Original) A composition in accordance with claim 1 wherein said ionic liquid comprises a cation and an anion; wherein said cation is selected from the group consisting of ions defined by the formulas:

and combinations of any two or more thereof, wherein:

$\text{R}_1, \text{R}_2, \text{R}_3, \text{R}_5, \text{R}_6$  and  $\text{R}_7$  are selected from saturated and unsaturated hydrocarbons containing from 1 to 7 carbon atoms per molecule;  $\text{R}_4, \text{R}_8, \text{R}_9, \text{R}_{10}, \text{R}_{11}, \text{R}_{12}, \text{R}_{13}, \text{R}_{14}, \text{R}_{15}, \text{R}_{16}, \text{R}_{17}, \text{R}_{18}$ , and  $\text{R}_{19}$  are selected from saturated and unsaturated hydrocarbons containing from 1 to 7 carbon atoms per molecule, and hydrogen; and

wherein said anion is selected from the group consisting of halides of:

Group IIIA metals, copper, zinc, iron and phosphorus.

6. (Original) A composition in accordance with claim 1 wherein said mixtures of Bronsted acids and Lewis acids comprise a Bronsted acid selected from the group consisting of hydrofluoric acid, sulfuric acid, trifluoromethane sulfonic acid, and combinations of any two or more thereof.

7. (Original) A composition in accordance with claim 1 wherein said acid component is present in said composition in a range of from about 5 weight percent to about 90 weight percent based on the total weight of said composition.

8. (Original) A composition in accordance with claim 1 wherein said acid component is present in said composition in a range of from about 30 weight percent to about 85 weight percent based on the total weight of said composition.

9. (Original) A composition in accordance with claim 1 wherein said acid component is present in said composition in a range of from about 50 weight percent to about 80 weight percent based on the total weight of said composition.

10. (Original) A method for making a composition, said method comprising the step of:

admixing an acid component selected from the group consisting of 1) sulfuric acid, 2) a fluorosulfonic acid, 3) a perhaloalkylsulfonic acid, 4) an ionic liquid, 5) mixtures of Bronsted acids and Lewis acids, and 6)

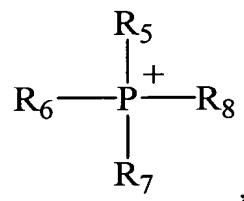

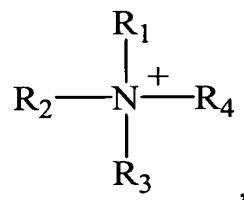

combinations of any two or more thereof and a polymer, to form a mixture thereof.

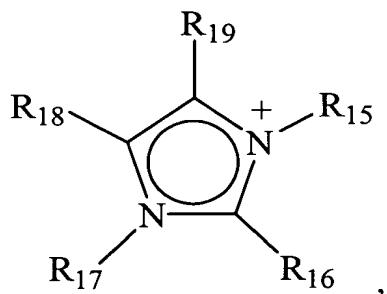

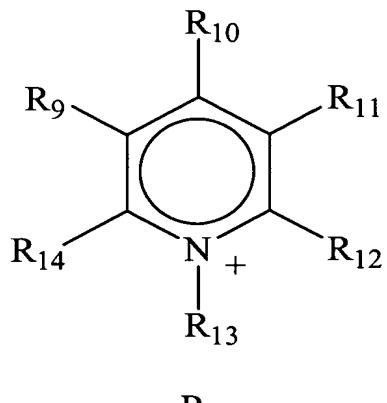

11. (Original) A method in accordance with claim 10 wherein said polymer is a polyacrylate having a formula of  $[-\text{CH}_2-\text{CH}(\text{CO}_2\text{R})]_n$  where R is a Group IA element.

12. (Original) A method in accordance with claim 11 wherein said Group IA element is hydrogen.

13. (Original) A method in accordance with claim 10 wherein said base component is trifluoromethanesulfonic acid.

14. (Original) A method in accordance with claim 10 wherein said ionic liquid comprises a cation and an anion; wherein said cation is selected from the group consisting of ions defined by the formulas:

and combinations of any two or more thereof, wherein:

R<sub>1</sub>, R<sub>2</sub>, R<sub>5</sub>, R<sub>6</sub> and R<sub>7</sub> are selected from saturated and unsaturated hydrocarbons containing from 1 to 7 carbon atoms per molecule;

R<sub>4</sub>, R<sub>8</sub>, R<sub>9</sub>, R<sub>10</sub>, R<sub>11</sub>, R<sub>12</sub>, R<sub>13</sub>, R<sub>14</sub>, R<sub>15</sub>, R<sub>16</sub>, R<sub>17</sub>, R<sub>18</sub>, and R<sub>19</sub> are selected from saturated and unsaturated hydrocarbons containing from 1 to 7 carbon atoms per molecule, and hydrogen; and

wherein said anion is selected from the group consisting of halides of:

Group IIIA metals, copper, zinc, iron and phosphorus.

15. (Original) A method in accordance with claim 10 wherein said mixtures of Bronsted acids and Lewis acids comprise a Bronsted acid

selected from the group consisting of hydrofluoric acid, sulfuric acid, trifluoromethane sulfonic acid, and combinations of any two or more thereof.

16. (Original) A method in accordance with claim 10 wherein said acid component is present in said composition in a range of from about 5 weight percent to about 90 weight percent based on the total weight of said composition.

17. (Original) A method in accordance with claim 10 wherein said acid component is present in said composition in a range of from about 30 weight percent to about 85 weight percent based on the total weight of said composition.

18. (Original) A method in accordance with claim 10 wherein said acid component is present in said composition in a range of from about 50 weight percent to about 80 weight percent based on the total weight of said composition.

19. (Original) A process comprising contacting under suitable alkylation reaction conditions a hydrocarbon mixture comprising olefins and paraffins with a composition prepared by the method of claim 10.

20. (Original) A process in accordance with claim 19 wherein said base component is selected from the group consisting of 1) a sulfuric acid, 2) a fluorosulfonic acid, 3) a perhaloalkylsulfonic acid, 4) an ionic liquid, 5)

Bronsted acid and Lewis acid mixtures and 6) combinations of any two or more thereof.

21. (Original) A process in accordance with claim 20 wherein said base component is trifluoromethanesulfonic acid.

22. (Original) A process in accordance with claim 19 wherein said polymer is a polyacrylate having a formula of  $[-\text{CH}_2-\text{CH}(\text{CO}_2\text{R})-]_n$  where R is a Group IA element.

23. (Original) A process in accordance with claim 22 wherein said Group IA element is hydrogen.

24. (Original) A process in accordance with claim 19 wherein said base component is present in said composition in an amount in the range of from about 5 to about 90 weight percent of the total weight of said composition.

25. (Original) A process in accordance with claim 19 wherein said base component is present in said composition in an amount in the range of from about 30 to about 85 weight percent of the total weight of said composition.

26. (Original) A process in accordance with claim 19 wherein said base component is present in said composition in an amount in the range of from about 50 to about 80 weight percent of the total weight of said composition.

27. (Original) A process in accordance with claim 19 wherein the alkylation reaction temperature is in the range of from about 5°C to about 150°C and the alkylation reaction pressure is in the range of from about ambient pressure to about 50 atmospheres.

28. (Original) A process in accordance with claim 19 wherein the molar ratio of paraffin to olefin in said hydrocarbon mixture is in the range of from about 2 to 1 to about 25 to 1

29. (Original) A process in accordance with claim 19 wherein said olefins are mono-olefins having from 2 to 12 carbon atoms, and wherein said paraffins are isoparaffins having from 4 to 8 carbon atoms.
